

United Nations Development Account in Latin America

Accountability Systems for Measuring, Monitoring and Reporting on Sustainable Cities Policies in Latin America

DURATION
| 2016-2019

OUTPUTS

- Accountability initiatives & tools
- Training manual on SDGs, urban development, accountability
- Indicators on sustainability
- New research and best practices

ACTIVITIES

1

CAPACITY
Training and capacity development for local government

2

STRENGTH
Strengthening national training institutions

3

INITIATIVE
Developing accountability initiatives

4

CITY LABS
Innovative city labs for city stakeholders

5

ONLINE ACADEMY
Online Urban Accountability Academy

6

ANALYSIS
Supporting data analysis indicators and visualization

IMPACT

SDGs 11, Sustainable Cities and Communities

This project will strengthen accountability systems in Latin American cities and support monitoring of government policies for achieving the SDGs, in particular the Goal 11. It provides opportunities for the establishment of mechanisms for dialogue between local governments and civil society in monitoring and overseeing the implementation of the SDGs at the local level. The project is demand-driven and addresses the measurement of public policies that aim at the achievement of Goal 11, covering issues ranging from housing, slum upgrading to public space, urban mobility and air quality amongst other relevant themes.

8 CITIES IN LATIN AMERICA
